## **First order from Singapore for Chemel AB**

Lund, September 9th, 2010

Only a month after shipping its first instrument to the newly appointed distributor for Singapore and Malaysia, Chemel is now proud to announce its first Malaysian order for a SIRE P200 instrument and printer, complete with kits for glucose measurement.

The client is Malaysian Palm Oil Board, [www.mpob.gov.my](http://www.mpob.gov.my), working with the extraction of ingredients from palm oil and involved in many applied research projects in Malaysia.

We are truly impressed by the speed at which the local distributor, i-DNA Biotechnology, managed to secure the business and we look forward to many more successful sales in Singapore and Malaysia.

Sara Jensen, Group CEO Chemel/ Biotech-IgG Group

---

Chemel is a provider of equipment and applications for the measuring of target substances in microorganism culture within the bioprocess and food industry. Its Sales & Marketing organisation, Biotech-IgG, is a supplier of products for research, routine and process applications to the food industry and biotechnology industry. Furthermore, Biotech-IgG is a well-established supplier of immunodiagnostics to, among others, hospitals in their diagnostic activities.

### **Vision**

Through its own sales activities in Sweden and Denmark, Chemel aims at becoming the leader within its areas of activity, with particular emphasis on analysis products for the biotechnology and pharmaceutical industry. Other markets will primarily be developed through distribution partners and acquisitions.
